

Nanocar charging

1. Plug the charger into AC socket and turn on AC power.
2. Leave the 5 mm DC plug open, if the LED on charger is green, it is working normally.
3. On the nanocar , plug the Battery cable connector into “Conn_2”.
4. Leave the Nanocar power switch as “off” (towards Conn_2).
5. Insert the 5 mm DC plug into the “conn_1” of the nanocar.
6. If the LED on the charger turns red, it is charging the battery.
7. If the LED on the charger is green, it means that the battery is fully charged.
